DETAILED ACTION

Remarks

1. Claims 2 and 8 were canceled; and new claims 13-21 are added.

Allowable Subject Matter

2. Claims 1, 3-7, and 9-21 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The prior art of record issued to Rehban fails to teach or suggest a broadcast receiver which detects the reception status of radio waves from other stations without deteriorating the reception status of a currently-receiving station, in digital broadcasting where consecutive time series data is transmitted. The amount of time-based interleave applied to the currently-receiving data is determined so that the reception status of the radio waves from other stations is detected while the reception of the currently-receiving broadcast station is interrupted within the extent where missing data can be recovered by such interleave and error correction processing on demodulation. Particularly, Rehban is silent on the step of comprising "a signal analyzing part extracts a control signal from a received signal and that the control signal indicates whether or not the received signal is interleaved along a time axis" as cited in claims 1 and 7; and for claim 13, Rehban also does not suggest varying a duration that the control circuitry interrupts a reception of a first broadcast signal based on the characteristics of the first broadcast signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yokoyama et al, Easley et al., and Audebert et al. (PTO-892 attached) disclose systems related broadcast disruption and control method.
